

Department of Land Resources

- The Department of Land Resources encompasses the science and practice of land assets and environmental resources.
- Internationally, top universities in Europe, America, Japan, Korea, China, and other regions all have departments dedicated to this field.
- "In addition to urban and rural planning, land development, real estate management, real estate investment, real estate appraisal, land administration, and real estate brokerage, it places greater emphasis on the conservation of environmental resources. The program also cultivates expertise in environmental engineering, environmental planning, environmental management, contaminated land remediation, and environmental impact assessment.
